Outline for an Examination of Turco-Syrian Trade

Expansion of Turco-Syrian trade requires the dismantling of policy induced barriers – protectionist instruments and political obstacles. Arguably, the two countries exhibit similar factor endowment characteristics, but this, by itself, need not be an impediment to greater trade as attested to by growing intra-European Union trade (which may be viewed to be of the North-North variety). While product complementarity is an important issue, it would appear that for the case of trade prospects between Turkey and Syria, policy induced barriers are also significant.

According to official statistics, Turkey was the third most important export market for Syria, accounting for 9% of the country's total exports in 2003. As a source of imports to Turkey, Syria ranked thirty-first, accounting for 0.7% of Turkey's imports in 2003.

According to the International Trade Centre (ITC), average trade (sum of exports and imports) to GDP ratio for the Syrian Arab Republic was 70.6% between 2000-2002, while the same figure for Turkey was 60.5%¹. Calculation of the same measure for intra-MENA² trade³ shows Syria to be relatively more open to trade with MENA partners than Turkey.

Although the figures above portray Syria to be relatively open to global trade, or at least on a par with Turkey, in fact, the former's trade is highly regulated⁴. Moreover, Syria's exports to Turkey are not diversified at all, as depicted in table 4. Indeed, **94.4% of Syria's exports to Turkey in 2003 were in just two items, mineral fuels/distillation products and cotton**, which were both likely to have been products of the public sector. Such a high degree of lack of diversification alone should imply that there should be more avenues for trade.

Effective tariff rates were 0.8% in Turkey and 7.2% in Syria, but these figures do not reveal effective **bilateral tariff rates**. International Monetary Fund (2001)⁵ rates Syria's trade restrictiveness at the highest level in its rating scale due to pervasive non-tariff barriers (NTBs). This is less of an issue for Turkey, a World Trade Organization⁶ (WTO) member. **Examination of NTBs with regards to bilateral trade would also be useful.**

¹ Gökkent (forthcoming) calculates the same ratio to be roughly the same in both countries at about 48% in 2002.

² MENA – Middle East & North Africa.

³ Gökkent (forthcoming) defines this as local trade openness.

⁴ Thus, Syria would be a ready market for Turkish exports if NTBs were to be lifted, but the converse is not so obvious.

⁵ Refer to various IMF staff country reports.

⁶ WTO focus has been elimination of NTBs, and allowing use of tariffs by signatories which are, of course, more transparent than NTBs.

It may also be instructive for the analysis of Syria's overall trade to employ a standard gravity model. This approach would help in the macroeconomic analysis of the determinants of Syrian trade.

Table 4 provides straightforward figures for indicative potential trade, defined as Syria's the value of total exports of a good less value of exports of that good to Turkey⁷. These may be used as 'a departure point for further investigations', according to ITC. Similarly, figures 1 and 2 may be a guide to determining which sectors should be promoted.

Turkey's customs treaty with the EU obliges the country to impose common EU tariff rates on imports from third countries. One way to get around this rule would be through **shuttle trade**⁸. Such trade already exists along the border region between Syria and Turkey, but steps to mutually liberalize such trade may be beneficial to trade expansion⁹. It would likely be safe to state that the official bilateral trade figures underestimate the true extent of trade links.

Expansion of bilateral merchandise trade would likely be slower to respond than would be the case with, for instance, the tourism sector. **Travel receipts from Turkish visitors alone would not be as large a market¹⁰ as the possibility of attracting foreign tourists in Turkey to also come to Syria.** Possibilities of such dual-packaging should be explored, and impediments to travel should be minimized.

A wealth of raw data exists on which a comprehensive analysis of Turco-Syrian trade could be based. Some of these are presented in the remainder of this document.

⁷ Recall that trade may be due to diversion or creation; naturally, with the latter being of more interest to policymakers. This method may allow identification of promising sectors in bilateral trade.

⁸ Shuttle trade is the term used to describe frequent travel by individuals across countries with the purpose of buying and selling goods. For instance, Turkish exports via shuttle trade to CIS member countries is estimated at around two billion US dollars, down from several billion in the late 1990s.

⁹ Encouragement of such trade may require a wider examination of subsidized prices, should any exist, and possible tariff revenue losses.

¹⁰ Turkish balance of payments data estimate travel outflows at US\$ 2.1 billion in 2003.

Notes - Tables 1 & 2

BASIC INDICATORS

Trade per capita is estimated as a country's total trade of goods and services (exports + imports, balance of payments basis) divided by the population. It is calculated on the basis of data for the three latest years available.

Trade to GDP is estimated as a country's total trade of goods and services (exports + imports, balance of payments basis) divided by GDP. It is calculated on the basis of data for the three latest years available. GDP is measured in nominal terms and with market exchange rates.

Real GDP, exports and imports of goods and services (national accounts based), refer to data at constant 1995 prices or volume figures based on 1995.

Ranks in world trade of merchandise and commercial services are defined first referring to European Union (EU (15)) members as individual traders and second referring to the EU (15) as one trader (i.e. excluding individual EU (15) members).

TRADE POLICY

The Trade Policy Review date indicates the date of release of the latest policy review issued by the Secretariat for the country considered.

The tariff binding coverage corresponds to the number of the Harmonized System (HS) subheadings containing at least one bound tariff line divided by the respective total number of HS subheadings of the corresponding version of the HS nomenclature. The year shown refers to the latest final year of implementation.

For MFN bound tariffs, the simple average of *ad-valorem* (AV) duties refers to the simple average of AV final bound HS 6-digit duties. For MFN applied tariffs it refers to the simple average of *ad-valorem* MFN applied HS 6-digit duties, taking into account AV equivalents if submitted for WTO's IDB. The non AV duties as a percentage of total tariff lines refer to the number of HS subheadings having at least one non AV duty without AV equivalent, divided by the respective total number of HS subheadings. Duties not provided are treated as non AV.

Agricultural goods according to the AOA (WTO Agreement on Agriculture) definition refer to HS chapters 1 to 24 (excluding fish and fish products) and a number of manufactured agricultural products (for further information see "The Legal Texts, The Results of the Uruguay Round of Multilateral Negotiations", WTO). This definition does not correspond to the definition of agricultural products presented in the breakdown of merchandise trade by main commodity group (see below).

Import duties collected in total tax revenue and import duties collected to total merchandise imports are estimated in general on the basis of data for the three latest years available.

The number of GATS services sectors with commitments has been established by the WTO Secretariat on the basis of available information, using as benchmark the Services Sectoral Classification List (MTN.GNS/W/120). The total number of sub-sectors is in the order of 160. The total number of services sub-sectors for individual EC-12 Members (EU (15) members except Austria, Finland and Sweden) equals the total number of sub-sectors included in the EC-12 schedule.

For EU (15) members the number of notifications outstanding (NO) refers to the sum of NO of the EU (15) and of the individual country.

For the number of contingency measures in force, data for EU (15) countries and new EU members (Cyprus, Czech Republic, Estonia, Hungary, Latvia, Lithuania, Malta, Poland, Slovak Republic and Slovenia) refer to the EU (25) number. The number of safeguard measures in force is based on information made available to the Committee on Safeguards (document G/L/651, Annex 3). Please note that there is no obligation on WTO Members to notify the expiry or termination of safeguard measures.

MERCHANDISE TRADE (customs-based statistics)

The share in world total exports and imports of merchandise for individual countries is calculated using world trade including intra-EU (15) trade. For the EU (15) as one trading reporter the share is calculated on the basis of world trade excluding intra-EU (15) trade.

Breakdown by main commodity group according to the ITS (WTO International Trade Statistics) definitions: *Agricultural products* refer to food (SITC Rev. 3 sections 0, 1, 4 and division 22) and raw materials (SITC Rev. 3 divisions 21, 23, 24, 25 and 26). It differs from the Agricultural goods AOA definition (see above). *Mining products* include ores and other minerals; fuels and non-ferrous metals. *Manufactures* refer to iron and steel, chemicals, other semi-manufactures, machinery and transport equipment, textiles, clothing and other consumer goods. Please note that due to the products not classified in the three main product groups, the sum of shares may not add up to a 100.

Breakdown by main destination and main origin: EU (15) members are grouped as one trading partner. The shares for unspecified destinations and origins are presented when at least one of the shares is greater than the share of the fifth main destination or origin.

COMMERCIAL SERVICES (balance of payments based statistics)

The share in world total exports and imports of commercial services for individual countries is calculated using world trade including intra-EU (15) trade. For the EU (15) as one trading reporter the share is calculated on the basis of world trade excluding intra-EU (15) trade.

Breakdown by principal services items: Other commercial services refer to communication, construction, insurance, financial, computer, information, other business, and cultural and recreational services, and royalties and license fees.

Annual average percentage changes are calculated using a geometric average. EU (15) refers to the 15 members prior to May 2004 (Austria, Belgium, Denmark, Finland, France, Germany, Greece, Ireland, Italy, Luxembourg, Netherlands, Portugal, Spain, Sweden and United Kingdom). The Separate Customs Territory of Taiwan, Penghu, Kinmen and Matsu is referred to as Taipei, Chinese in the tables.

Abbreviations:
